

1) How Many Attacks In Cybersecurity.

i) Ransomware Attack

ii) Malvertising Attack

iii) Ddos Attack

iv) Malware Attack

v) Phishing Attack

vi) Mitm Attack

: Explain Attack

i) Ransomware Attack

: There Are Attack a your data are lock or interrupt your data that time hacker are seeing your screen to how much money give its called ransom attack.

ii) Malware Attack

: Uses Malicious software such as viruses

iii) Phishing Attack

: hacker sent a fake email and any typer of massage you clik and that time your data are come to haker.

iv) Mitm Attack (man in the Middle Attack)

: interrupts communication between two parties.

v) Ddos Attack

: the company website are there that crashed and server down that are use overload server or network traffic.

vi) Malvertising Attack

: where there are hacker sent through antivirus or any type of websites there are already viruses are installed that time use

2) CIA Triad

i) Confidentiality

: there are unauthorized person not see data its called

ii) Integrity

: there are unauthorized person not modified your data its called.

iii) Availability

: making sure that authorities parties are able to access the data when they need.

3) There are Three Pillar in Cyber Security.

i) people

ii) Processes

iii) Technology
